

# Enterprise Mobility Suite

The Enterprise Mobility Suite is a comprehensive cloud solution to help manage and protect users, devices, apps, and data in a mobile-first, cloud-first world.

## Enterprise Mobility Suite

Low-cost license on cloud services for all users

- Enterprises need to combine their infrastructure technology environment with a common identity across on-premises and the cloud, with deeply integrated capabilities for PC and mobile device management.
- Users are expected to be productive across a variety of device types, with access to the applications they need.
- To require a comprehensive set, businesses must protect their data to access control and data-protection capabilities.

The Enterprise Mobility Suite is a comprehensive cloud solution for consumerization of IT and designed to help manage and protect users, devices, apps, and data in a mobile-first, cloud-first world.

Enterprise Mobility Suite discount makes it the most cost-effective way to acquire the included cloud services:

- Microsoft Azure Active Directory for hybrid identity management
- Microsoft Intune for mobile device and application management
- Microsoft Azure Rights Management for information protection

## Identity-driven security

To protect against suspicious logins, Enterprise Mobility Suite determines risk severity for every user sign-in attempt, so risk-based conditional access rules can be applied.

To create more effective, granular level policies, EMS gains deeper visibility into user, device, and data activity on-premises and in the cloud. Classify and label files at creation, track their usage, and change permissions when necessary.

Enterprise Mobility Suite identifies attackers in your organization using new behavioral analytics and anomaly detection technologies – all driven by enormous amounts of threat intelligence and security research data.

## Managed mobile productivity

Enterprise Mobility Suite is the only solution built with the gold standard of productivity. This means that email and other Office files can be secured without compromising the Office experience.

Set up easy access to resources that automatically sign in once to secure connection to all corporate resources, on-premises and in the cloud, from any device.

Employees can encrypt virtually any type of file, track usage, and set granular permissions. The encryption stays with the file where it goes, which will enable more secure file sharing, internally and externally.

## Flexible & Comprehensive

Get an integrated set of solutions that are designed to work together with your on-premises investments, avoiding the need for costly and complicated integration efforts across point capabilities.

As a cloud solution that integrates with on-premises infrastructure, EMS future-proof your investment, takes the worry out of scale, maintenance, and updates.

To make deployment even easier, Enterprise Mobility Suite simplifies your set-up that comes with FastTrack - a Microsoft service that includes best practices, tools, resources, and experts committed to make your experience with EMS a success.

Cased Dimensions' complete solution can cost less than combining standalone products from other vendors.
